

Passive Rewards Token

Maximizing security and efficiency with SmartDeFi

All-In-One Ecosystem

The first token with a swap protocol and liquidity is all held within a single smart contract! There is no longer a need to pick where to host trading.

Routing Feature

The first token with a swap protocol and liquidity is all held within a single smart contract! There is no longer a need to pick where to host trading. Peer-to-Peer (P2P) and Swap-to-Swap (S2S) transfers make it possible to move funds with increased privacy and lower fees.

SmartSwap-Enabled

SmartSwap technology is included inside the token's swap protocol, offering record low gas fees across all supported chains.

Eliminate Rug-Pulls

Token liquidity is held securely inside the token's own contract, and is inaccessible, making it impossible to rug-pull and eliminating the need for liquidity provider (LP) tokens.

Frictionless Rewards

SmartDeFi™ tokens allow a configurable percentage of all trading volume to be awarded directly to its holders, which then automatically compounds.

fWrap-Enabled

SmartDeFi™ employs fWrap base assets. As a result, liquidity receives fWrap reflection rewards, resulting in constant upwards price pressure.
